**ODONATOLOGICAL BIBLIOGRAPHY OF
FREDERICK CHARLES FRASER**

Basil Elwood Montgomery(†)

PREFACE

In the annals of odonatology there are but few students as prolific as the late Lt Col. Dr F.C. FRASER (1880-1963). In addition to his general work on the phylogeny and classification of the order, in his taxonomic works he touched upon all faunal regions, and his regional monographs on the fauna of India, Australasia, Africa and South America are much more than merely an indispensable basis for subsequent research. His odonatological oeuvre consists of over 300 papers and treatises, scattered in periodicals of all continents. Although he himself kept a fairly good record of his publications, a complete bibliography has never been published, and many of his papers are not readily available outside the largest specialized libraries.

The present bibliography is based on the list compiled by the late Professor Dr B.E. MONTGOMERY, and was subsequently completed from various sources, including the Zoological Record. All titles were checked with reprints or xerox copies in Professor Dr B. KIAUTA's library; therefore I hope that the bibliography is largely complete and that not many bibliographic errors have escaped our notice.

During his years as a surgeon in the Indian Medical Service, Dr Fraser devoted most of his free time to the Indian fauna. His work, largely summarized in the three odonate volumes of the Fauna of British India (1933-1936), still represents almost everything that is so far known on dragonflies of the Indian Subcontinent. Dr Fraser, therefore, is rightly considered the "Father of Indian Odonatology". For this reason, and in order to facilitate current work on Indian Odonata, this bibliography is being simultaneously published also in the Special Publications series of the S.I.O. National Office in India.

Fraser's bibliography will certainly stimulate and facilitate the work of dragonfly students throughout the world, and I feel particularly

happy that its publication coincides with the opening of the Ninth International Symposium of Odonatology in the South Indian city of Madurai.
