

correct determination.

The female identified as *Anotogaster basalis* Sel. is in fact a somewhat atypical teneral specimen of *A. nipalensis* Sel.

Gynacantha bayadera Sel. — a male was taken at Biritante (970 m) near Pokhara on 4.XII.

Anax indicus Lieft. — specimens were found in both V and IX at several localities between 700 and 900 m in the Pokhara region and also in the eastern Terai at Taraha (200 m).

FURTHER NOTES ON NEPALESE ODONATA IN 1986

In my last paper on the Nepalese dragonfly fauna (1987, *Notul. odonatol.* 2: 155) I reported on several large consignments of material sent to me by Colin Smiths who is now resident in Nepal. I would here like to record a further two species as new for Nepal and revise one in-
