An appraisal of the published work of Edmund Gittenberger is presented accompanied by a list of his new molluscan taxa, a total of 270 for the years 1960-2007.

Keywords: Gastropoda, Bivalvia, new taxa, Gittenberger, history of biology.

Edmund (Edi) Gittenberger's publication history started in 1960 with the publication of his first paper in the newsletter of the Dutch Malacological Society (Nederlandse Malacologische Vereniging, NMV). Here we describe 48 years of publication history, from 1960 until 2007. During this time Edi published 324 contributions. Over a quarter of his publications (27.8%) was published in 'Basteria', the journal of the Nederlandse Malacologische Vereniging of which he joined the editorial board in 1977. In 2000 he took over as editor-in-chief.

His professional scientific career started in 1965, when he became assistant-curator of the Mollusca at the National Museum of Natural History in Leiden (NNM). Here we first give an overview of his complete publication record until 2007. A complete list of his publications can be found on www.science.naturalis.nl. Secondly, we present a complete list of his taxa and the associated references as they were at the time this paper went to print. Data used in this paper were derived from the library of the first author and from that of the NNM.

As said, Edi published 324 papers, resulting in 4,364 pages. With a 48 year publication history this brings us to an average of approximately 92 pages per year. However, the output per year is very variable, so this number doesn't say much. We therefore looked at the average number of pages per paper per year (fig. 1). This shows that the overall average (13.5) is relatively high due to seven 'outliers', i.e. values that numerically strongly deviate from the rest of the observations. These seven peaks can be traced back to seven voluminous publications. In 1970 he published, together with Th. E. J. Ripken and W. Backhuys a field guide to the Dutch land snails. 1973 marked the publication of his thesis, a contribution to the knowledge of the Chondrininae. He translated Kerney and Cameron's field guide to the land snails of Britain and NW Europe, which appeared in 1980. The next two outliers are marked by two monographs. In 1984 he published, together with J.J. van Aartsen and H.P.M.G. Menkhorst, a treatise on the marine molluscs of the bay of Algeciras. Together with H.D. Boeters and P. Subai a monograph on the Aciculidae was published in 1989. The last two voluminous publications, in 1992 and 1998 were his contributions to the thesis of T. Kemperman and his work on the book on the freshwater molluscs of the Netherlands.

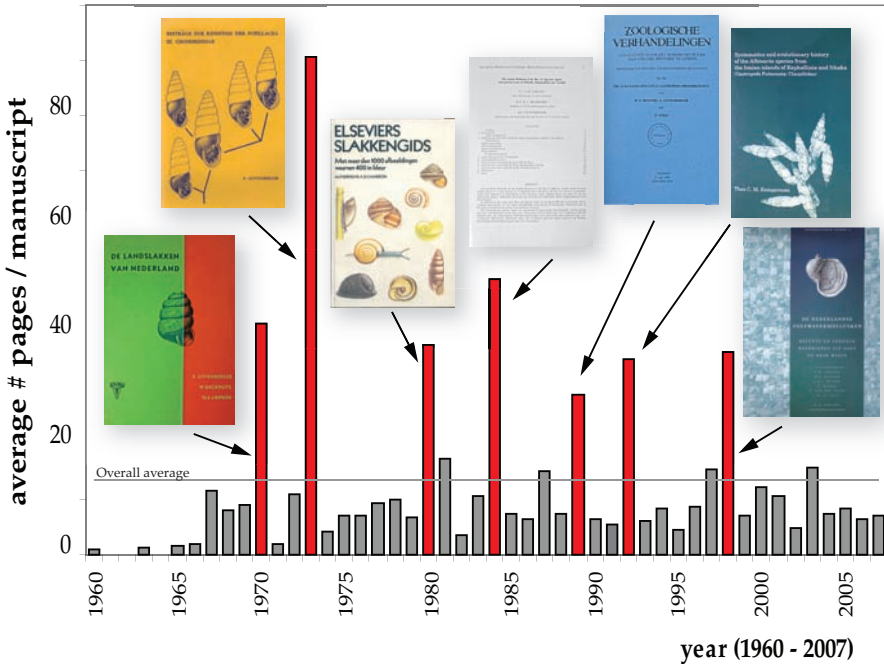

Fig. 1. Average number of pages published per year in the period 1960-2007. Seven outliers are shown in red with the associated book covers or title page.

When we look at his co-author list, we find a total of 110 people with whom he collaborated at least once. A top-ten of co-authors is listed in table 1.

Over the whole publication history a steady increase in number of publications can be observed (fig. 2a). These publications resulted in the description of 270 new molluscan taxa (fig. 2b). In total he described 1 new family (Elonidae), 18 genera, 4 subgenera, 207 species and 40 subspecies. A list of taxa is provided in table 2.

Thomson's 'ISI Web of Knowledge' (<http://www.isiwebofknowledge.com/>) gives us the opportunity to have a look at the contributions that were made to one of over 9,000 journals that are indexed by Thomson. Data are available from 1982 onward. This gives only a marginal representation of the work by Edi Gittenberger, since many taxonomically orientated journals and/or books (including *Basteria*) are not indexed. It does however give us some insight in the impact of his contributions. Edi published 52 papers in indexed journals (16% of all his contributions, 21% since 1982). These papers were cited 217 times (or 338 times when self-citations are included), yielding an average citation of 4.17 (6.50).

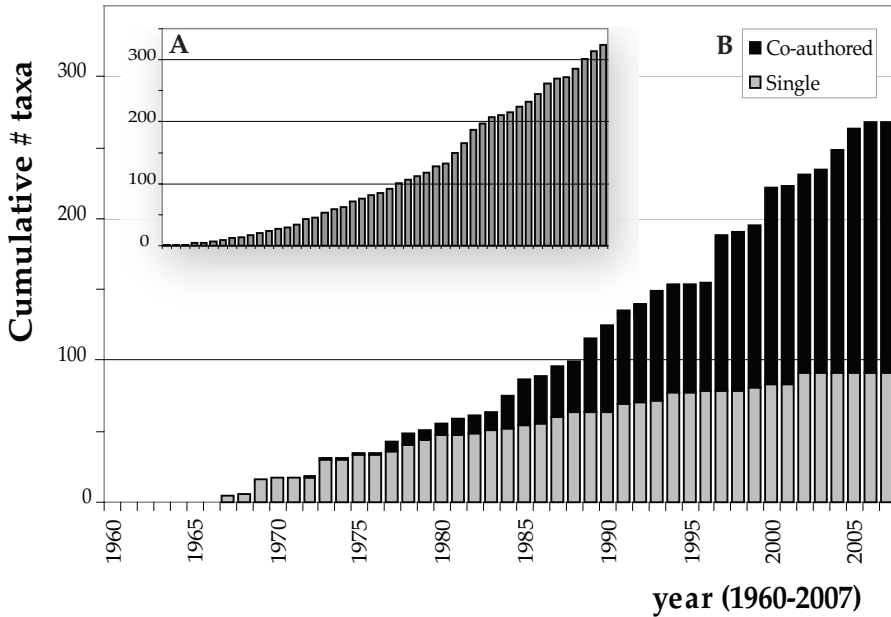

Fig. 2. A, Cumulative number of publications over the years 1960-2007. B, Cumulative number of taxa.

#	Co-author	# of co-authored publications
1	Menno Schilthuizen	22
