

in August and September were nearly all sterile. Only one out of 53 had a few eggs of different size in its abdomen.

31. *Chryspidea bractea* Schiff. One specimen.
32. *Catocala fraxini* L. Two specimens after five years of absence.
33. *Hypena obesalis* Treitschke. Again one specimen.
34. *Aplasta ononaria* Fuessly. One specimen in August, the second known from the Netherlands.
35. *Rhodometra sacraria* L. Two specimens in September, one in October.
36. *Nycterosia obstipata* F. One in May, one in June, four in July, 14 in August, three in September, two in October, and one in November, which makes a total of 29 specimens, the best number but one.
37. *Cosymbia puppillaria* Hübner. Three specimens, two in June, one in September.
38. *Nomophila noctuella* Schiff. First on April 28, rather scarce in May, June and July. Higher numbers in August, scarcer again in September and October. Last specimen on November 29. With a total of 1459 the best year but one.
39. *Udea ferrugalis* Hübner. One in May. Then present from the second half of July till the end of October, though very rare in that month. Total number 302, the highest ever obtained.
40. *Palpita unionalis* Hübner. Four specimens, all in the second half of September.
41. *Plutella maculipennis* Curtis. Observed from the end of April till November 25th. Total number 2705.

The observations of eight Belgian collaborators are added. They are in accordance with the results obtained in the Netherlands. Especially worth mentioning are the many specimens of *Colias hyale* observed in the eastern part of Belgium. The species must have been common there in August. This explains the high number observed in the south-eastern part of the Netherlands.

As the Belgian entomologists will start a group of their own, this is probably the last time that their observations are added to the Dutch ones.

The season 1964 can safely be characterised as a very good one with two species never observed before, several rarities and high figures for many others. A real silver jubilee year!

Amsterdam-Z 2, Oude IJselstraat 12 III.
