

NAAMLIJST VAN PHANEROGAMEN EN VAATKRYP- TOGAMEN OP NOORD-BEVELAND MET VERMELDING VAN GROEIPLAATSEN

DOOR

W. W. SCHIPPER. †
Ingekomen 12 Mei 1931.

Het aantal kwartiervakjes der kaart van Dr GOETHART en JONGMANS, waarin op Noord-Beveland zichtbaar bloeiende planten voorkomen, bedraagt 85. 'k Heb in de loop van enige jaren in alle „gehokt” en in verscheidene zelfs ettelike malen. Toch ben ik veel der hier volgende opgaven van groeiplaatsen verschuldigd aan de heren A. HEULE, in leven te Kamperland, en J. HUISSON te Colijnsplaat. Ook de heer T. OVERTVELD, indertijd te Wissenkerke, heeft wel aan het „hokken” deelgenomen. Bovendien dank ik vrij wat aantekeningen aan de heer JAN G. SLOFF, door hem ontleend aan zijn gegevens voor I.V.O.N. die, wat Noord-Beveland betreft, zo goed als alle afkomstig zijn van voornoemde personen.

De bodem van het eiland bestaat voor een zeer groot deel uit kleigrond, en aangezien daarop veel aan wisselbouw gedaan wordt zijn er de groeiplaatsen van de zogenaamde onkruiden zeer aan verandering onderhevig. Men denke er eens aan, hoe de wild groeiende flora veranderend zal zijn daar, waar b.v. een akker plaats gemaakt heeft voor een weide of omgekeerd. Ook andere invloeden

doen zich gelden. *Helminthia* b.v. aangevoerd steeds met zaaizaad van lucernklaver, die er nog veel verbouwd wordt, kwam er vroeger veel voor en nu weinig meer. Of dit, daar de plant uit zich zelf er zich niet handhaven kon, toegeschreven moet worden hieraan, dat nu het zaad misschien meer gezuiverd afgeleverd wordt, dan wel of dat tans meer betrokken wordt uit een streek, waar de plant minder voorkomt, kan ik niet beoordeelen.

Al komt *Rubus caesius* nog in duizenden eksemplaren, over het hele eiland verspreid, voor, toch heeft hij veel terrein verloren door het vele draineren, waardoor talrijke slootvormige afscheidingen tusschen de akkers (reën), waar de plant graag groeien mag, gedempt werden.

De noordelijke en westelijke kust van het eiland met haar schorre, strand- en duinvormingen zijn steeds zeer aan aanwas en afslag onderhevig, waardoor er in de groeiplaatsen ook veel verandering optreedt. Zo is b.v. *Beta maritima*, die aan de noordkust gedurende enkele jaren op drie plaatsen stond, thans geheel verdwenen, doordat de bodem er weg sloeg of de plant diep onder zand begraven werd. Zo ook verging het *Convolvulus Soldanella*.

Meer standvastig zijn natuurlijk de groeiplaatsen aan de vele dijken van dit polderland, hoewel de planten er steeds veel te lijden hebben van koeien, die er een groot deel van het jaar over lopen te grazen. Ook in de zogenaamde kuipen, plekken met waterhoudende putten, ingesloten door zee- en inlaagdijk, zijn de groeiplaatsen meer standvastig.

Het eiland biedt de wild groeiende flora, behalve veel bouwland, nog menige andere gelegenheid, en van gans andere aard aan, om zich er te vestigen en zulks niet zelden dicht in elkanders nabijheid gelegen. In een kort bestek kan men daar dan veel plantensoorten aantreffen. Hoe groot in zulk een geval het aantal wel zijn kan in één kwartiervakje, als dit bevat bouwland, weide, zeedijk, binnendijk, schorre, strand, duinvorming, zout, brak en zoet water,

blijkt b.v. in Q 2, 65, 33, waarin er niet minder dan 186 aangetekend werden van de 467, die op het eiland gezien zijn. In Q 2, 66, 41 werd zelfs het getal 200 overschreden.

Van bosflora wordt men op het eiland bitter weinig gewaar, daar men er slechts één bos, n.l. dat op de buitenplaats „Sorgwyck” (R 2, 15, 11), aantreft, en dat bovendien parkachtig aangelegd is en zo ook onderhouden wordt.

Veel dijken zijn beplant met knotwilgen, knotpopulieren en olmen.

Achillea Millefolium L. In alle kwartiertvakjes; *Aegopodium Podagraria* L. Q 2, 64, 43, 65, 32, 34, 42, 66, 34, 41, 43; R 2, 14, 21, 22, 23, 24, 15, 11, 12, 14, 21, 24, 31, 16, 21, 17, 13.
