

6. Uurgemiddelden

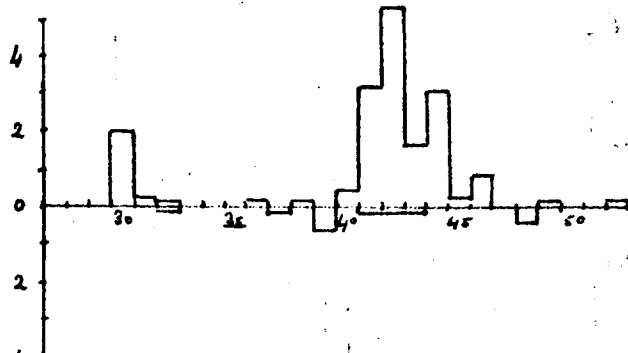

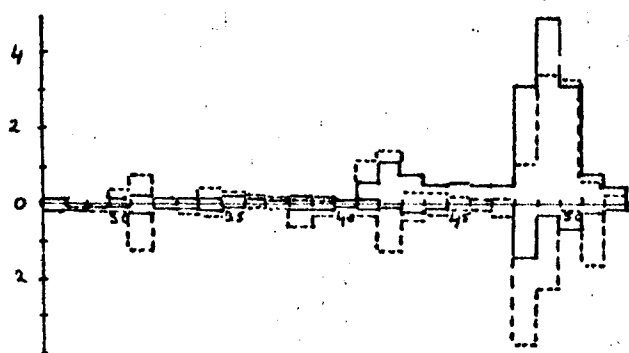

6.1. Toelichting

In de volgende figuren is het uurgemiddelde per zevendaagse periode weergegeven. Hierbij is het aandeel van de noordwaarts vliegende vogels onder de abscis uitgezet, terwijl het uurgemiddelde van de zuidwaarts vliegende vogels boven de abscis is weergegeven. De ter plaatse waargenomen vogels zijn bij deze berekening dus niet meegeteld.

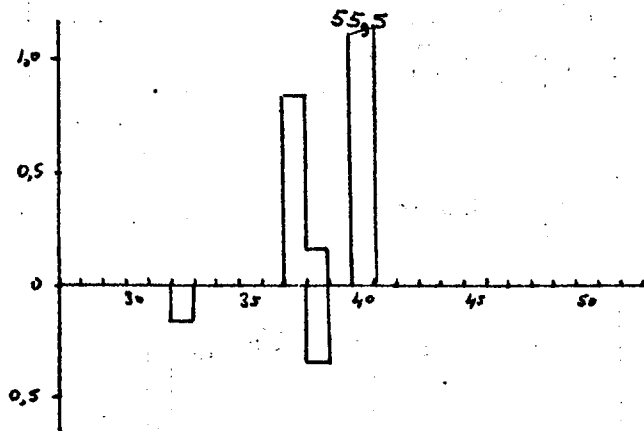

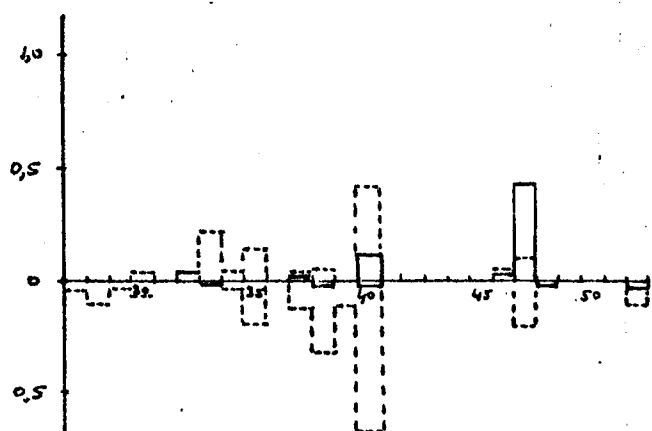

Voor alle soorten zijn twee figuren opgenomen, met uitzondering van Dwergstern en Zwarte stern. In de linker figuur zijn de uurgemiddelden van de Zuidhollandse kust + IJmuiden met een gesloten lijn weergegeven, terwijl de uurgemiddelden van de Hondsbossche Zeewering met een stippellijn zijn genoteerd. In de rechter figuur zijn de uurgemiddelden van de Noordzeekust van de Waddeneilanden weergegeven. De figuren 6.13 t/m 6.16 hebben alleen betrekking op de Hondsbossche Zeewering.
