

6. UURGEMIDDELDEN.

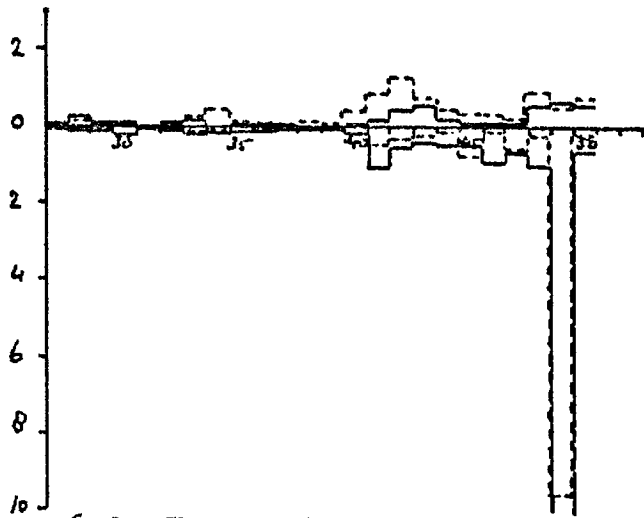

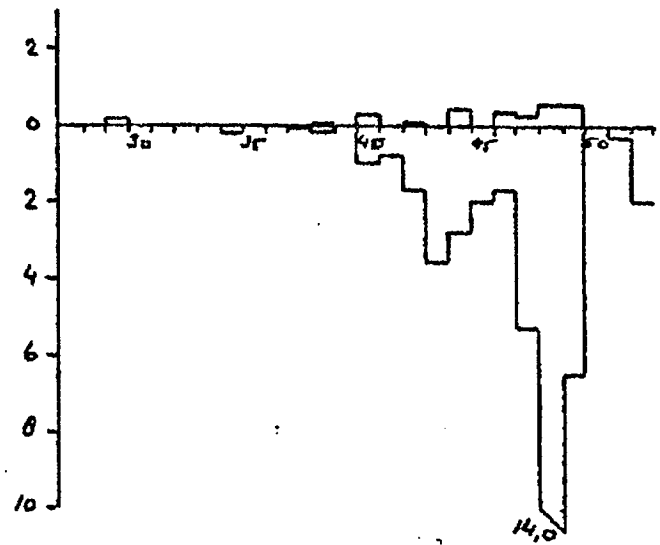

6.1. Toelichting

In de volgende figuren is het uurgemiddelde per zevendaagse periode weergegeven. Hierbij is het aandeel noordwaarts vliegende vogels bóven de abscis uitgezet, terwijl het uurgemiddelde van de in zuidelijke richting passerende vogels ónder de abscis is weergegeven ($\neq$ verslag nr. 13!). Voor de meeste soorten zijn, net als in hfdst. 5., steeds twee figuren opgenomen. In de linker figuur de resultaten van de Z. Holl. kust+IJmuiden met een gesloten lijn en die van de N. Holl.-kust met een stippellijn, in de rechter figuur de waarnemingen van de waddenkust. De figuren 6.14 t/m. 6.17 hebben alleen betrekking op de uurgemiddelden van de Hondsbossche Zeewering.
