

6. Uurgemiddelden

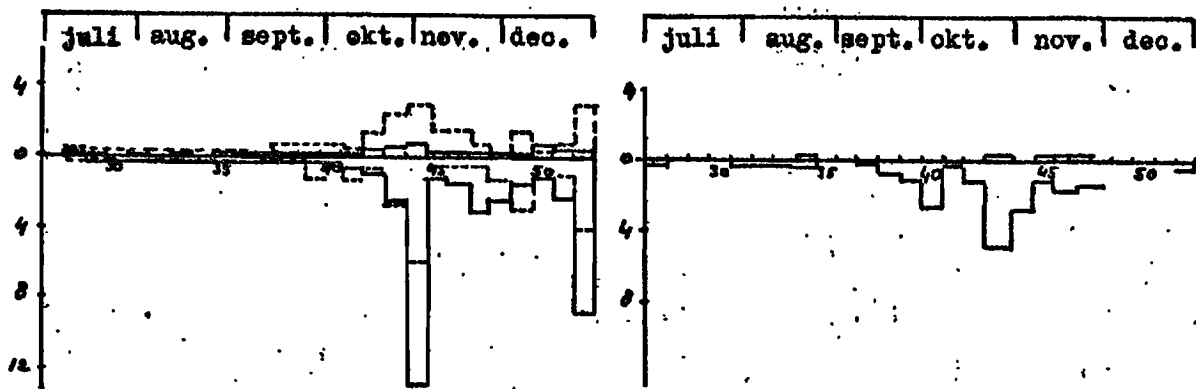

6.1. Toelichting

In de volgende figuren is het uurgemiddelde per zevendaagse periode weergegeven. Hierbij is het uurgemiddelde van de noordwaarts vliegende vogels boven de abscis uitgezet, terwijl het uurgemiddelde van de zuidwaarts passerende vogels onder de abscis is aangegeven.

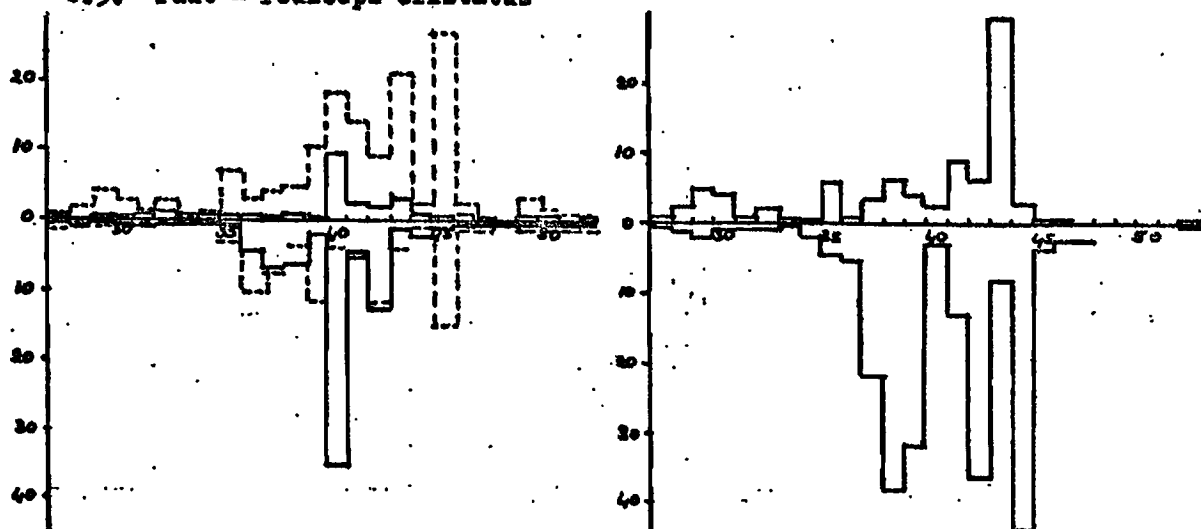

Voor de meeste soorten zijn twee figuren opgenomen. In de linker figuur zijn de gegevens van de Zuidhollandse kust (+Westkapelle en IJmuiden) met een dichte lijn ingetekend, terwijl de uurgemiddelden van Noord-Holland Noord met een stippellijn zijn aangegeven. In de rechter figuur zijn de gegevens uit het Waddengebied terug te vinden. Door het geringe aantal waarnemingen in de perioden 48 t/m 51, vertoont de figuur voor het Waddengebied een hiaat voor genoemde perioden.
