

6.1. Uurgemiddelden.

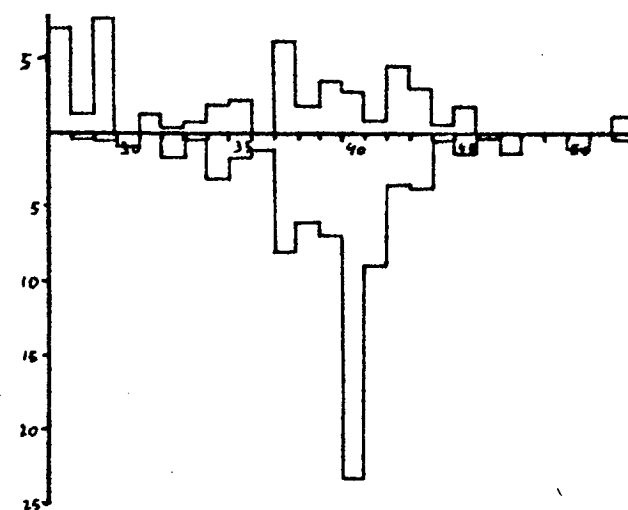

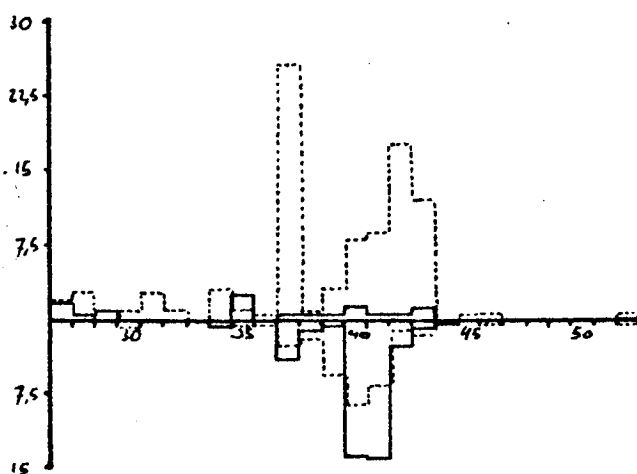

In de volgende figuren is het uurgemiddelde per zevendaagse periode weergegeven. Hierbij is steeds het uurgemiddelde van noordwaarts passerende vogels boven de abscis uitgezet, terwijl het gemiddelde van de zuidwaarts vliegende vogels onder de abscis is weergegeven. Voor de meeste soorten is alleen een figuur gegeven voor de Hollandse kust. Hier geldt de stippellijn weer voor waarnemingen van de Noordhollandse kust, de ononderbrokenlijn voor de Zuidhollandse kust (+IJmuiden). In de rechter figuren is het uurgemiddelde van de Wadden uitgezet. Voor de Stormmeeuw en de Kleine Mantelmeeuw zijn alleen uurgemiddelden van Noord-Holland uitgezet.

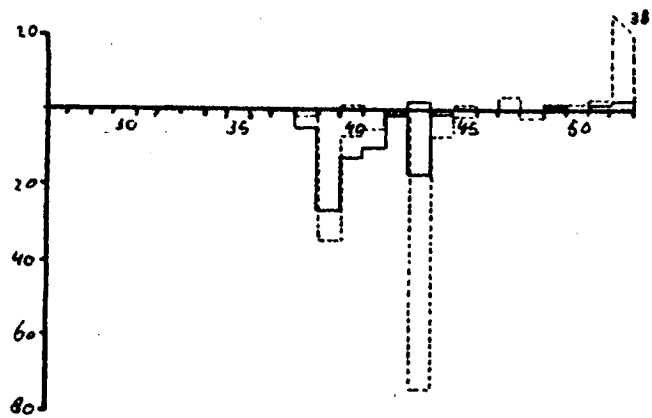

6.2. Duikers - *Gavia spec.*

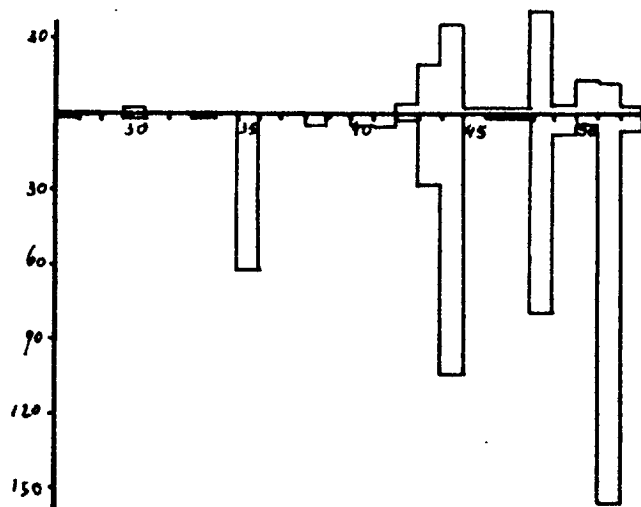

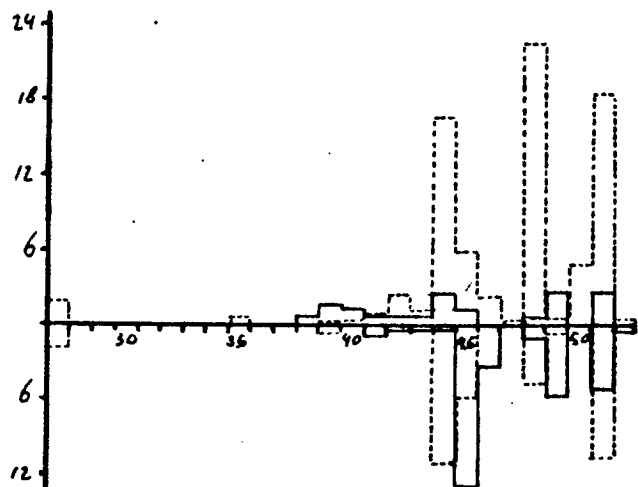

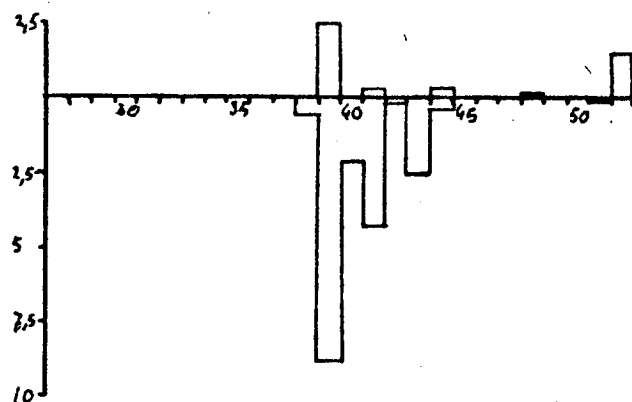

6.3. Fuut - *Podiceps cristatus*

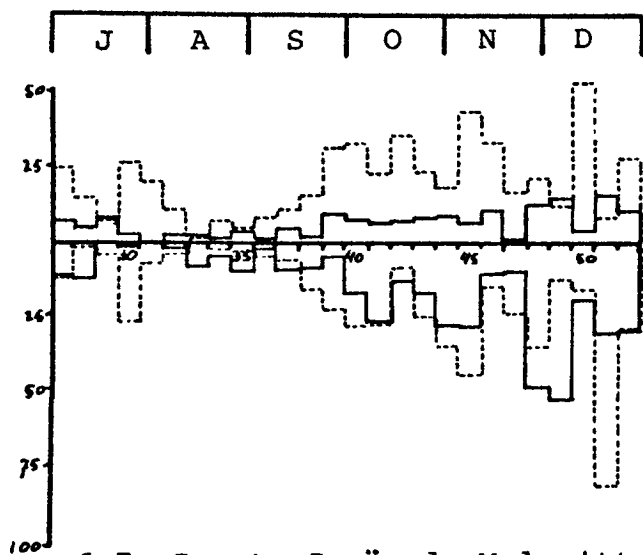

6.4. Jan van Gent - *Sula bassana*

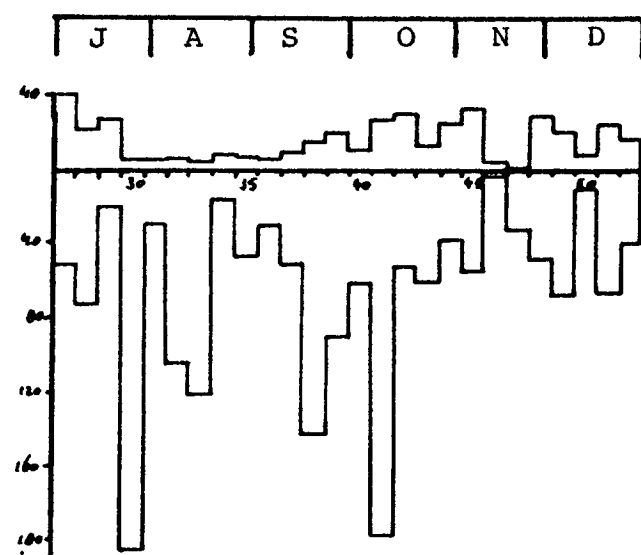

6.5. Rotgans - *Branta bernicla*

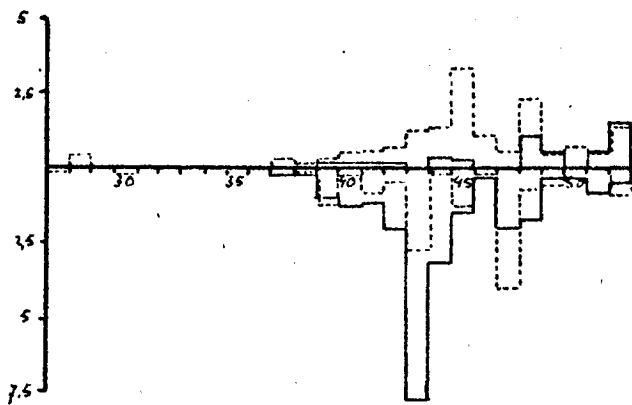

6.6. Eidereend - *Somateria mollissima*

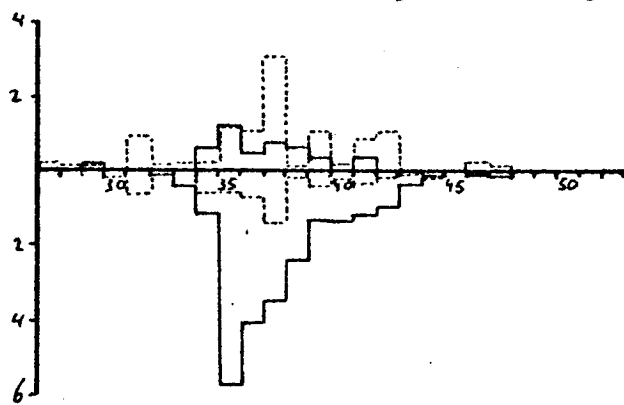

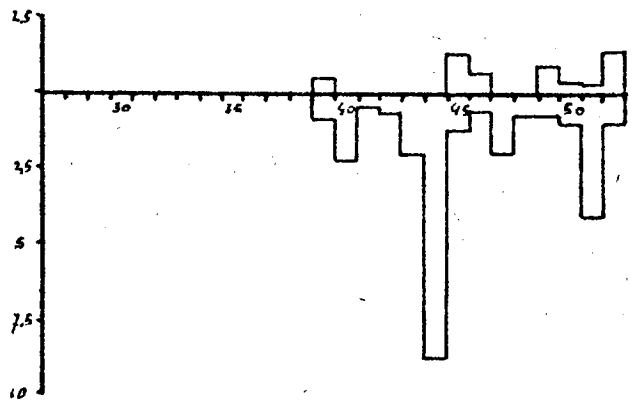

6.7. Zwarte Zeeëend - *Melanitta nigra*

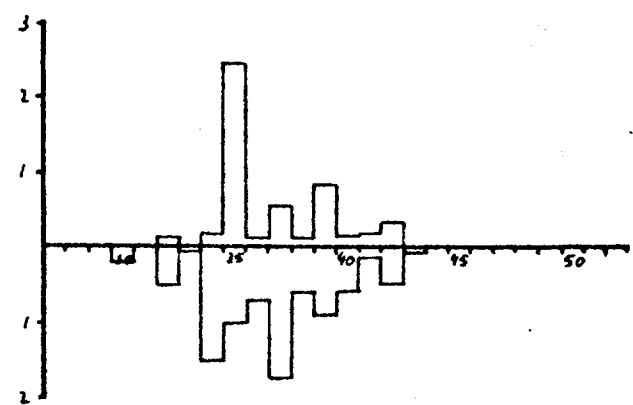

6.8. Grote Zeeëend - *Melanitta fusca*

6.9. Middelste Zaagbek - *Mergus serrator*

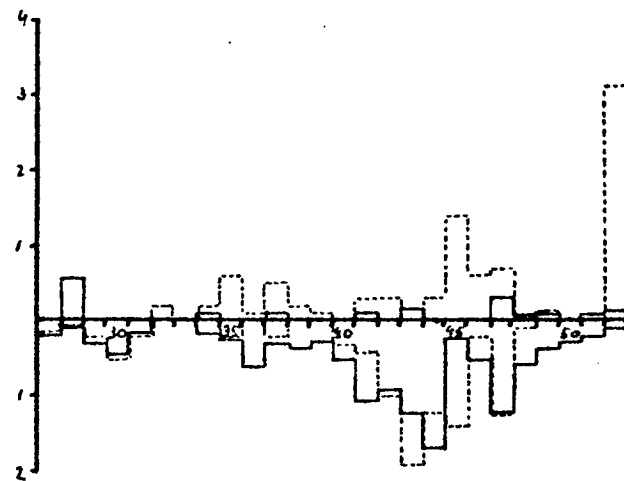

6.10. Kleine Jager - *Stercorarius parasiticus*
